

Abstract

A cookware assembly includes an open-top vessel with diametrically opposed handles and diametrically opposed pour spouts, and a lid including an outer peripheral frame member, a central member spaced from the frame member and support structure coupled to each of the frame member and the central member closing the space therebetween. A flange depends from the frame member and has a plurality of vertically elongated apertures therethrough adjacent to a predetermined location on the frame which carries indicia to indicate the location of the apertures.
